Education

University of California, Berkeley

Expected May 2027

B.A. in Economics & Data Science

GPA: 3.83

Relevant Coursework: Data Structures, Computer Graphics, Computer Networking, Econometrics, Linear Algebra, Microeconomic & Macroeconomic Theory, Probability and Statistics

Technical Skills

Programming: Python, R, SQL, Java, TypeScript

Libraries and Frameworks: pandas, NumPy, scikit-learn, React, FastAPI, Node.js

Databases: PostgreSQL, MySQL

Tools: Git, Claude Code, MCP, OpenAI API, Prompt Engineering, Excel VBA, LaTeX

Languages: English (fluent), Mandarin (fluent)

Experience

Design Engineering Intern

Jun 2026 to Aug 2026

Liminal Machines, Inc. (Limion), Hybrid

- Prototype product directions for Limion, an AI tool that organizes team AI prototyping around open questions, working daily in agentic workflows with **Claude Code and MCP servers**.
- Shipped v2 of the product's onboarding **guide prototype**, grounded in the team's system model, publishing versioned review packages through the product's MCP pipeline.
- Audited the product's board **AI agent** (FastAPI, WebSocket intents, 28 tools) and its Storybook (267 stories), cited to file and line, adopted to scope the agent workflow redesign.

Frontend Engineer

Sep 2025 to Jan 2026

Mill Pond Research, Berkeley, CA

- Designed and shipped Mill Pond Research's **website** end to end, from **Figma wireframes** to a responsive, component-based **React and Tailwind** implementation.

Research Assistant

Aug 2025 to Aug 2026

Berkeley Haas, Community Health Worker Decision Support project (ChatCHW), Berkeley, CA

- Built **LLM and NLP pipelines** with the OpenAI API to convert clinical manuals into **DMN** tables, covering parsing, chunking, prompt templates, rule extraction, and versioned provenance.
- Shipped **evaluation and delivery** tooling with synthetic cases, end to end tests against source text, and a light retrieval augmented query layer with guardrails and logging.

Research Assistant

Jan 2025 to Dec 2025

UC Berkeley, Economics Department, Berkeley, CA

- Used **natural language processing** with the OpenAI API to classify **10,000+** finance articles on the Fed's use of moral suasion with reproducible prompts and batch runs.
- Benchmarked against human coded labels to assess precision and recall, raising reliability for policy analysis; co wrote the methods section on pipeline design and audit trails.

Projects

Spatch (Cooking EdTech Platform)

Jul 2025 to Present

European Innovation Academy, Porto, Portugal

- Built a **full stack** platform with React and Tailwind on the front end and FastAPI and SQLAlchemy on the back end that supports auth, recipe create read update delete, progress tracking, and image upload.
- Led student usability tests and translated findings into short iteration cycles that improved task completion time and cut drop offs per step view while keeping the interface simple.

Financial News Scraper

Apr 2025

UC Berkeley, Economics Department

- Built a Python Selenium pipeline for **10,000+** articles with session persistence, dynamic page handling, polite rate limits, and automatic retries to ensure complete capture at scale.
